DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

PROJECT TITLE: Atria Connect – Online No Due & Hall Ticket Clearance Portal

PROJECT MEMBERS:

GUIDE: Prof. Keerthi K.S

SL No	Name	USN	Department

PROJECT DESCRIPTION:

Atria Connect is a web-based portal that digitises the No Due clearance students must complete before their examination hall tickets are issued. Instead of carrying a paper form from department to department for signatures, every stakeholder reviews and approves the student online, and the student can follow the progress of their clearance in real time.

Modules / User Roles:

- **Administrator –** assigns faculty to subjects section-wise, bulk-uploads student data through CSV files, and issues or revokes hall tickets once every condition is met.
- **Faculty –** sees only the subjects assigned to them and marks each student Cleared or Not Cleared; a reason is mandatory when a subject is not cleared.
- **Accounts –** records hostel, library and tuition fee dues for each student, individually or through a CSV upload.
- **Class Coordinator –** reviews clearances, dues and uploaded documents, then signs off or rejects with written feedback.
- **Student –** views subject-wise clearance, pending dues and approval status, and uploads supporting documents such as certificates (PDF or image).

Workflow:

Faculty Clearance → *Dues Settled* → *CC Sign-off* → *Hall Ticket Issued*

The server enforces this order, so a hall ticket can never be issued while a subject or due is still pending, and every action is recorded in the student's activity log.

Technology Stack: Next.js 15 and React 19 with Tailwind CSS for the user interface; Next.js API routes on Node.js for the backend; MongoDB with Mongoose for data storage; JWT sessions in HTTP-only cookies with bcrypt-hashed passwords; deployed on Vercel with Vercel Blob for document storage.

Security: role-based access control checked on every request, login attempt limiting, file-type verification for uploads and server-side validation of all inputs.
